I have a background in Information Technology (IT) and am currently pursuing studies in Logistics Management. My experience in IT provides a foundation for understanding and integrating technology into logistics management. My interest in logistics management has led me to focus on aspects such as supply chain planning and inventory optimization. I see the potential to combine IT expertise with a deep understanding of logistics management, including the implementation of supply chain management systems and tracking technologies, to enhance operational efficiency and visibility. With a commitment to continuous learning and development, I believe that merging skills in both fields will enable me to make a meaningful contribution in navigating the evolving dynamics of the business environment.

Experience

1. Dinas Lingkungan Hidup (Internship/PKL)

Staff Asisstant

- Data Entry
- Document Preparation
- Data Compilation
- Data Enginnering
